

Renat R. Manassypov, PhD., P. Eng.

HVAC ENGINEERING BOOK

DESIGN PRINCIPLES OF CENTRAL
AIR-CONDITIONING SYSTEMS

The Academy of HVAC Engineering Ltd
2009

Contents

	Guide overview.....	5
1	Identification of space occupancy and heat gain sources.....	8
2	Development of the air-conditioning system design concept.....	9
3	Comfort zoning.....	18
4	General design criteria.....	19
5	Design climate conditions.....	21
6	Design thermal comfort conditions.....	27
7	Calculation of space outdoor airflow rate requirements.....	34
8	Space noise criterion.....	37
9	Envelope thermal performance.....	38
10	Calculation of space heat losses.....	44
11	Calculation of space cooling loads.....	50
11.1	Wall and roof cooling loads.....	52
11.2	Cooling loads from windows.....	57
11.3	Cooling loads from lighting and office equipment.....	63
11.4	Occupant cooling loads.....	64
11.5	Total space cooling loads.....	64
12	Calculation of the space-level design supply airflow rates.....	65
13	Calculation of the zone-level design supply airflow rates.....	67
14	Calculation of the system-level design supply airflow rate.....	70
15	Calculation of the outdoor airflow rate at the system air intake.....	71
16	The basics of psychrometric analysis.....	74
17	Configuring an air-handling unit.....	77
18	Sizing of space air diffusion outlets.....	79
19	Sizing of ductwork.....	85
20	Sizing of supply and return fans.....	92
21	Sizing of the central cooling coil.....	102
22	Sizing of the central heating coil and humidifier.....	112
23	Sizing of zone and space heating units.....	118

24	Sizing of the heating plant.....	123
24.1	Calculation of the heating plant output.....	124
24.2	Sizing of the boilers.....	126
24.3	Sizing of hot water piping.....	129
24.4	Sizing of the expansion tank.....	133
24.5	Sizing of the heating pumps.....	134
25	Development of the air-conditioning system controls concept.....	136
26	Example of the air-conditioning system design process.....	141
